15 LIQUIDITY COVERAGE RATIO (%)		124.37%		119.21%		118.08%		117.94%

Qualitative Disclosure

The LCR standard aims to ensure that a bank maintains an adequate level of unencumbered High Quality Liquid Assets (HQLAs) that can be converted into cash to meet its liquidity needs for a 30 calendar day time horizon under a significantly severe liquidity stress scenario specified by supervisors. At a minimum, the stock of liquid assets should enable the bank to survive until day 30 of the stress scenario, by which time it is assumed that appropriate corrective actions can be taken.

The LCR should be minimum 100% (i.e. the stock of HQLA should at least equal total net cash outflows) on an ongoing basis because the stock of unencumbered HQLA is intended to serve as a defence against the potential onset of liquidity stress.

The composition of High Quality Liquid Assets (HQLA)

Banks' High Quality Liquid Assets consists of the following – (HQLAs are required to be taken at their market value for the purpose of computing the LCR)

- Cash including cash reserves in excess of required CRR.
- Government securities in excess of the minimum SLR requirement.
- Investments in Government securities held within the mandatory SLR requirement, to the extent allowed by RBI under Marginal Standing facility (MSF) which is at present 2 % of NDTL.
- Investment in Government Securities held up to 16 % of Net Demand and Time Liabilities (NDTL) permissible under Facility to Avail Liquidity for Liquidity Coverage Ratio (FALLCR).
- Level 2A assets –
 - Corporate bonds, not issued by a bank/financial institution/NBFC or any of its affiliated entities, which have been rated AA- or above by an Eligible Credit Rating Agency, subject to a minimum haircut of 15 %.
 - Commercial Papers not issued by a bank/PD/financial institution or any of its affiliated entities, which have a short-term rating equivalent to the long-term rating of AA- or above by an Eligible Credit Rating Agency subject to a minimum hair cut of 15 %.
- Level 2 B Assets –
 - Corporate debt securities and Commercial Papers rated between A+ and BBB-and Common Equity Shares not issued by Banks/FIs /NBFCs and included in NSE CNX Nifty index and/or S&P BSE Sensex index subject to a minimum hair cut of 50%.
- Cash outflows over the 30 days period – Bank considers Cash outflows from Retail Deposits, secured and unsecured wholesale funding, undrawn committed credit and liquidity facilities subject to applicable run-off factors as prescribed by RBI.
- Cash Inflows over the 30 days period – Bank is also looking into the cash inflows within 30 days period arising out of maturing secured lending transactions and other inflows from Retail and small business counterparties, non-financial wholesale counterparties as well as amounts to be received from financial institutions and RBI at the prescribed weightages.
- LCR is computed as under –

Total stock of High quality liquid Assets over Total Net Cash outflows.

Intra period changes:

The intra period changes are mainly on account of changes in unencumbered excess SLR positions, variations in Level 2A / Level 2B assets, regulatory changes in MSF and FALLCR levels if any and various components under net cash outflows over the 30 days period.

Other Regulatory Requirements –

- a. Currency Mismatch in LCR - The Bank has aggregate liabilities in denominated foreign currency (USD) of more than 5 per cent of the Bank's total liabilities and LCR is also computed in USD.
- b. Centralization of liquidity management - Banks' liquidity management and monitoring is centralized. Bank has put in place a Board adopted Liquidity Management Policy in line with RBI regulation and guidelines.

Inflows and outflows are comprehensively captured in the automated LCR system (BASEL).

Bank is required to maintain minimum LCR of 100% on an ongoing basis as per RBI guidelines w.e.f January, 2019. The average LCR for the quarter ended March 2025 is 124.37%.

Qualitative Disclosure

The NSFR is defined as the amount of available stable funding relative to the amount of required stable funding. “Available stable funding” (ASF) is defined as the portion of capital and liabilities expected to be reliable over the time horizon considered by the NSFR, which extends to one year. The amount of stable funding required ("Required stable funding") (RSF) of a specific institution is a function of the liquidity characteristics and residual maturities of the various assets held by that institution as well as those of its off-balance sheet (OBS) exposures.

NSFR represents the ratio of the bank's ASF to RSF. The breakdown of the bank's ASF and RSF amounts after applying the respective ASF or RSF factors are provided in the “weighted amount” column of the NSFR disclosure format.

The ASF portfolio is driven mainly by a robust capital base and a strong retail deposit base. Similarly, the RSF portfolio is driven mainly by financing various stakeholders including but not limited to financial institutions (FIs), non-financial corporate clients, retail and small business customers. NSFR helps to reduce structural liquidity of the Bank by encouraging funding of business activities through more stable sources.

Bank is required to maintain minimum NSFR of 100% on an ongoing basis as per RBI guidelines w.e.f October 1, 2021. As on 31.03.2025, NSFR of the Bank is at 121.82%. The table above sets out the details of NSFR of the bank as on 31.03.2025.
